

image scanning

All images, either embedded or attached within an email are scanned if the image is of pornographic content the email is quarantined. The sensitivity of the filter can be adjusted to cater for individual client needs.

process

When images get scanned their dataflow (shape, colour, texture etc) is translated into a digital signature. This signature then compared against known pornographic images, if it falls into the same area then the image is of pornographic content.

reporting

Detailed reporting is available showing which images have been received, by whom and who from.

benefits

EMAIL SYSTEMS BENEFITS:

- ∴ Provides proactive 'duty of care' for organisations
